nFolks redefines cutting-edge innovation with 20 patents in the domain of data integration and data movement.

We take pride in successfully building and delivering training assignments that others may find daunting.

IBM Partners

nFolks partners extensively with IBM Expert Labs. We not only deliver IBM-built training courses globally, but also build our own training content for customers and partners.

Assessment

Training needs are assessed, and a personalized plan is designed to best address the requirement.

Certification

We are working on providing badges and certifications to users that successfully complete a quiz / assessment after attending our training programs.

Stay Up To Date

We constantly update our content and build new training content to be able to train customers and partners on latest applications and technologies.

Specialists In Cp4d, WKC And DataStage Trainings

We have successfully delivered many training assignments in the Cloud Pak for Data space. We were the first to build training content and deliver trainings on Watson Knowledge Catalog and DataStage on CP4D.

The nFolks Approach

To be able to support our customers to the best of our ability, we engage multiple proctors in a training assignment along with an instructor, so the participants can work with proctors if they need additional apart from what is being covered by the instructor.

Consulting

We not only deliver trainings but also support any consulting or development engagements. We have a strong SME team of highly skilled and certified data engineers, solution architects, platform administrators, and data scientists that can help you rapidly adapt to Cloud Pak for Data.

DataStage Modernization with nFolks Services

We are uniquely positioned to help you achieve your goals of Data Integration modernization by providing our expertise to reduce risks involved thereby increasing overall confidence. Our Data Integration specialists assess your ETL code and determine which nFolks services like DataDios, SmartDiff etc. will fit for your specific use-case to accelerate modernization to CP4D. We support end to end which includes Server to Parallel conversions, migration creation of all associate components required for the code to run on CP4D.

With the continuous increase in data volumes and types, enterprises must continue to modernize their information architectures to ensure efficient cost-effective data integration, the pace at which businesses modernize is unique. There is no one-size-fit-all solution. In view of the need for self-paced modernization, IBM DataStage and Information Server customers can now take advantage of IBM Cloud Pak for Data by transforming their architecture. Apart from increasing scalability and agility, customers will be able to take full advantage of cloud-based technologies and services available on CP4D. In addition to providing a competitive advantage to an organization, this modernization is an effective way of improving infrastructure at a reasonable cost.

We have an exceptional CP4D team of highly skilled and certified data engineers, solution architects, platform administrators, and data scientists. You can rapidly adapt to DataStage NextGen with help from our consulting, architecture design, modernization, and

conversion services. Partnering with us means getting a well-put-together solution based on our partnerships, competencies, and certifications in the related technology space. With the help of our DataDios suite of product we make sure that your ETL code is modernized to run at its best on CP4D rather than just picking up code from its current platform and dumping onto CP4D.

Why Modernize with the nFolks team

At nFolks, we have a team of highly skilled and certified engineers, architects, administrators, and data scientists who are all very motivated and experienced in modernizing DataStage NextGen. Our expertise with Product Engineering and our proprietary tools like DataDios and SmartDiff provide a great deal of automation minimizing the need to rewrite the code. nFolks' engineering team gives us an edge over competition where we can customize or create new tailor-made automations to expedite the overall process.

Our engineering team has extensive experience in data Transformation and Load, with IBM DataStage and other tools in this space. Multiple connectors and migration tools built from scratch showcase our expertise in this area of work. In addition, customers have endorsed nFolks' expertise and value add we bring in the DataStage space based on our knowledge and expertise with IBM tools.

Modernization

- Migrate from legacy InfoSphere Information Server to IBM Cloud Pak for Data.
- Move from your On-Prem env to be a fully functional Cloud native solution.
- Remediate your ETL as part of your overall modernization strategy involving migrating to a data warehouse or a data lake service in the cloud.
- Consolidate Data Governance deployments in your datacentre by migrating governance framework and artifacts from multiple systems into a single application.
- Migrate your Data Integration, Data Quality, Data Analysis, Data Virtualization, Data Governance solutions onto Cloud native applications.

OTHER SERVICES AVAILABLE

- Installation Upgrade
- ETL migration to cloud
- Health check
- RDBMS / IGC to WKC conversion
- Impact Analysis
