nFolks redefines cutting-edge innovation with 20 patents in the domain of data integration and data movement

We take pride in successfully building and delivering training assignments that others may find daunting.

IBM Partners

nFolks partners extensively with IBM Expert Labs. We not only deliver IBM-built training courses globally, but also build our own training content for customers and partners.

Assessment

Training needs are assessed, and a personalized plan is designed to best address the requirement.

Certification

We are working on providing badges and certifications to users that successfully complete a quiz / assessment after attending our training programs.

Stay Up to Date

We constantly update our content and build new training content to be able to train customers and partners on latest applications and technologies.

Specialists In CP4D, WKC And DataStage Trainings

We have successfully delivered many training assignments in the Cloud Pak for Data space. We were the first to build training content and deliver trainings on Watson Knowledge Catalog and DataStage on CP4D.

The nFolks Approach

To be able to support our customers to the best of our ability, we engage multiple proctors in a training assignment along with an instructor, so the participants can work with proctors if they need additional apart from what is being covered by the instructor.

Consulting

We not only deliver trainings but also support any consulting or development engagements. We have a strong SME team of highly skilled and certified data engineers, solution architects, platform administrators, and data scientists that can help you rapidly adapt to Cloud Pak for Data.

Data Governance Migration to CP4D with nFolks Services

- We are uniquely positioned to help you achieve your goals of migrating existing Governance artifacts to CP4D by providing our expertise to reduce risks involved thereby increasing overall conviction.
- Our Data Governance specialists assess your framework and determine the automation that can be built to fit your specific use-case to accelerate migration to CP4D.
- We support exporting of all supported assets from IGC and then import them onto the WKC required command and scripts are built to automate this process.

Data governance is a principled approach to managing data during its life cycle, from acquisition to use to disposal. Every organization needs data governance. As businesses throughout all domains proceed on their digital-transformation journeys; data has quickly become the most valuable asset they possess.

Management needs accurate and timely data to make strategic business decisions. Marketing and sales professionals need trustworthy data to understand what customers want. Procurement and supply-chain management personnel need accurate data to keep inventories stocked and to minimize manufacturing costs. Compliance officers need to prove that data is being handled according to both internal and external mandates et al.

Our team consists of highly skilled and certified data engineers, solution architects, platform administrators, and data scientists. Our consulting, architecture design, migration, and conversion services can help you quickly adapt to Watson Knowledge Catalog helping you reap the benefits within a short period of time. Partnering with us gets you a comprehensive solution that is based on our expertise, competencies, and certifications in the related technology space. With the help of our strong Engineering team, we ensure your Governance framework is built to run at its best on Watson Knowledge Catalog rather than just migrating your existing solution onto CP4D.

Why Partner with the nFolks team

Our team comprises of highly skilled and certified engineers, architects, administrators, and

data scientists who are all highly motivated and experienced in modernizing to Watson Knowledge Catalog on Cloud Pak for Data.

Our expertise with Product Engineering provides a great deal of automation minimizing the manual effort for modernization.

Availability of an experienced engineering team at nFolks give us an edge over competition where we can customize or create new tailor-made automations to expedite the overall process.

Our engineering team has extensive experience in the area of data analytics and AI, in particular with IBM Information Server and other tools in this space. Multiple connectors and migration tools built from scratch showcase our expertise in this area of work. In addition, customers have endorsed nFolks expertise and value add we bring in the Data Governance space based on our knowledge and expertise with IBM tools.

Modernization

- Migrate from legacy InfoSphere Information Server to IBM Cloud Pak for Data.
- Move from your On-Prem env to be a fully functional Cloud native solution.
- Remediate your ETL as part of your overall modernization strategy involving migrating to a data warehouse or a data lake service in the cloud.
- Consolidate Data Governance deployments in your datacentre by migrating governance framework and artifacts from multiple systems into a single application.
- Migrate your Data Integration, Data Quality, Data Analysis, Data Virtualization, Data Governance solutions onto Cloud native applications.

OTHER SERVICES AVAILABLE

- Installation Upgrade
- ETL migration to cloud
- Health check
- RDBMS /IGC to WKC conversion
- Impact Analysis
